

COMPANY PROFILE

Kardelen Yazılım

Sustainable Healthcare Information Systems

ABOUT US

Kardelen Software, which is founded in 2001, is a technology company that develops Healthcare Information Management Systems.

It serves more than 60,000 end users in more than 200 health institutions with a total bed capacity of more than 25,000 and has a market share of around 25% throughout Turkey in this field.

It continues its operations with Kardelen Community, which consists of more than 1000 employees and business partners in Turkey and in different countries.

It meets the informatics needs of the healthcare industry with its expert team by using the latest technology in line with the principles of sustainability and accessibility.

VISION & MISSION

Kardelen Yazılım

Our Vision

To be an international health informatics platform by producing continuous innovation.

Our Mission

In the light of ethical values, to provide effective, safe and uninterrupted health informatics solutions that will increase the quality of health services that protect and improve human health without losing our empathy with healthcare workers, patients and their relatives.

PRODUCT PORTFOLIO

Hospital Information System

The Hospital Information System, which we offer for sale under the Karmed brand, offers a strong EMR and EHR infrastructure and has a rich content that can be adapted to clinical workflows.

Labaratory Information System

With Karmed Labs Information Systems, acceptance and quality criteria of all processes from preanalytical to postanalytical stages can be followed and processes can be analyzed with advanced reporting features.

Radiology Information System and PACS

You can manage imaging, appointment and reporting processes with Karmed Radiology Information System.

Kardelen Yazılım

Intensive Care Information System

With the brand Sivicare, which we created based on the words Simple and Vital, we brought a new perspective to intensive care information systems.

Teleradiology

Our Teleradiology product, which is one of the clearest examples of our Sustainable Health Information Systems vision, both ensures the effective use of human resources and prioritizes human health.

National Health Information Systems

As Kardelen Software, we use our experience in different areas of health information systems and our success in health institutions of different scales to design and develop health information systems at the national level.
